

To whom it may concern,

We are currently into our second production season using the Viking M500 VFFS for our very finely ground, dusty product. We are running a very thin poly to make the 17" x 23" bag. The Viking machine runs the thin poly very well.

When shopping around for a VFFS, I looked at several competitors units. The Viking unit was a better built and more user friendly machine. The impulse sealing system makes setting up and fine tuning the sealing temperatures and dwell time very simple which is critical when running a very thin poly.

The service and technical assistance offered by Viking is excellent. When contacting Viking, the service team is quick to respond and very knowledgeable.

I would highly recommend Viking Packaging Technologies and the Viking line of VFFS.

Mr. Kim Zimmerman
